SACRAMENTO COUNTY

J.P.Orr, Field & Vegetable Crops  
Farm Advisor - Cooperative Agricultural Extension - University of California.

GRAIN SORGHUM PRODUCTION - 1975

Soil Requirements: The highly productive organic and mineral soils as well as the deeper upland soils.

Planting Dates: Main season -- May 10 to June 15; Double crop -- June 15 to July 15. Soil temperature at planting depth should be over 65° F.

Harvest Dates: September 15 to December 15.

Varieties: Pioneer - Northrup King.

Seeding Rate: Full season -- 15-18 lbs./acre; small sized, early maturing varieties for late planting -- 18-25 lbs./acre.

Fertilizer Requirement: Organic soil -- 13-20 lbs. P per acre (30-45 lbs. P<sub>2</sub>O<sub>5</sub>).

Mineral soil -- starter fertilizer with N, P and K if soil is very P deficient, 100-150 lbs. N pre fertilized plus 13-20 lbs. P.

Irrigation: 1-1/2 to 2 acre feet of water. On organic soil sub irrigate. On mineral soil sprinkle, flood, or furrow irrigate, three to five irrigations needed.

Weed Control: Cultivation two to four times. 2,4-D may or may not be needed for broadleaved weed control. Atrazine is recommended for pre- or early post-emergence for both watergrass and broadleaved weeds. Propazine recommended for pre-emergence application.

Insect Control: Greenbug can be a severe problem, especially when sorghum is young. Can be controlled with Systox or DySiston. Control not as essential as plants head out.

Disease Control: Head Smut--resistant varieties.

Root rot and lodging--avoid moisture stress, especially in salt and alkali areas, use adapted varieties.

SAMPLE COSTS TO PRODUCE GRAIN SORGHUM ON PEAT & MINERAL SOILS

SACRAMENTO COUNTY - 1975

Yield: 6000 lbs/acre  
Price: \$130/ton

Gross: \$390/ac  
Net:

\$117.75    \$64.95

Operation	Date	Materials	Total Cost/Acre/Year	
			Peat	Mineral
<u>Cultural</u>
