Water at \$50/Acre Ft.

Cash Cost/Cwt.	\$30.14	\$25.17	\$21.86	\$19.49
Total Cost/Cwt.	\$33.44	\$27.81	\$24.06	\$21.83

This cost analysis worksheet should be used only as a guide to assist producers in determining their production costs and as an aid in helping analyze costs and procedures. The figures shown are based on what are considered good management practices and do not represent industry averages.

There is a great deal of variation in production costs between areas within a county. For example, tractor size, tillage operations, number of trips and materials may be different for neighboring farmers.

The land cost is a value related to rental costs rather than the interest on the market value. For the person renting land, the rental price should be substituted for land cost; also, interest and depreciation on the irrigation system and county taxes should be eliminated.
